

# EXIF GPS Batch Processor

## Usage

1. Launch the application.
2. Click “**Browse**” and select the **parent folder** containing your survey folders.
3. Check the **Cam folders (Cam1–Cam4)** and/or **HDC** to process.
4. Optionally, check “**Override Originals**”:
  - **Checked:** EXIF metadata is updated in-place.
  - **Unchecked:** Images are copied to a \_processed folder and updated there.
5. Click **Start**.
6. Progress is displayed in the progress bar.
7. Upon completion, a message box will display the total images processed.

## Notes

- Ensure **RSP or HDC files** are named exactly like the route folders (<FolderName>.RSP) and located in the **parent directory**.
- Cam images are matched to GPS coordinates based on **distance extracted from filenames**.
